EDUCATION

DEPARTMENT OF CHEMISTRY | Aristotle University of Thessaloniki
2021-Present

·Bachelor's thesis: The Impact of Palm Oil and Food Preservatives on Endothelial Function in Humans.

In the framework of my thesis, I studied the effects of palm oil and food preservative consumption on endothelial function in humans, a key factor associated with atherosclerosis. The experimental evaluation adhered to the FMD medical protocol, employing ultrasound and the innovative "Cor-IS" medical device to assess endothelial functionality. Additionally, the study incorporated data obtained through questionnaires and blood tests, providing a comprehensive analysis of dietary impacts on vascular health.
